**Exam** : **HP0-244**

**Title** : Advanced Backup  
Troubleshooting & Tuning

**Version** : DEMO

**1.HP Ultrium tape drives use the ATS (Adaptive Tape Speed) feature. The main purpose of ATS is to increase \_\_\_\_.**

- A.buffer capacity by varying the speed of the tape
- B.tape write speed by adjusting the host transfer rate
- C.overall performance by reducing the number of repositions
- D.tape read speed by adjusting the host transfer rate

**Correct:C**

**2.What is the maximum cable length of an LVD SCSI bus?**

- A.7 m
- B.12 m
- C.20,5 m
- D.25 m

**Correct:B**

**3.What happens if you connect an HVD (High Voltage Differential) HBA (host bus adapter) to an LVD (Low Voltage Differential) tape device?**

- A.The devices function correctly if you setup unique SCSI IDs and have proper termination.
- B.The devices do not function together and you may damage them.
- C.The devices function correctly after setting up the compatibility mode for the HBA.
- D.The devices do not function together unless you use active termination.

**Correct:B**

**4.What is an advantage of the Cartridge Memory (a memory chip located in the cartridge) of the LTO Ultrium technology (LTO-CM) over previous tape technologies?**

- A.It eliminates the need for barcodes and barcode readers in tape libraries.
- B.Data such as tape identity, type, usage and tape contents is read from a chip rather than the system area on tape, which reduces the wear and tear of that particular section.
- C.It contains troubleshooting information from the tape drive which can help to reduce overall repair times.
- D.The Ultrium drive reads data for firmware upgrades from a chip rather than a tape which increases the speed of the upgrade procedure.

**Correct:B**

**5.The DLT tape backward read compatibility of HP SuperDLT drives is possible due to the \_\_\_\_.**

- A.Magneto-Resistive Cluster (MRC) technology
- B.additional magnetic read-head
- C.Pivoting Optical Servo (POS) technology
- D.low-dens mode switch

**Correct:B**

**6.SCSI bus termination is \_\_\_\_.**

- A.optional
- B.required and there must be one terminator for each device on the bus
- C.required and there must be two terminators, one on each end of the bus
- D.required and done automatically by all SCSI devices

**Correct:C**

**7.Which tool, available at the HP web site, can size and configure the ideal backup solution for DAS, NAS and SAN environments using information you specify?**

- A.HP OpenView Data Protector configuration scripiter

- B.Backup Sizing Tool
- C.Enterprise Backup Solution Configuration Matrix
- D.HP StorageWorks Library and Tape Tools

**Correct:B**

**8.Which HP StorageWorks tape drive is the most appropriate choice for enterprise businesses with 150 GB of data to backup?**

- A.DAT 24
- B.DAT 72
- C.DLT VS 80
- D.Ultrium 460

**Correct:D**

**9.Click the Exhibit button. A customer has one single ESL9326D/DX with 4 DLT8000 drives. Which tape drive is supported for the next drives being installed in this library?**

Upgrade to drive	SDLT 220 (Ultra 2 SCSI)	SDLT 320 (Ultra 2 SCSI)	Ultrium 230 (Ultra 2 SCSI)	Ultrium 460 (Ultra 3 SCSI)	Media Partitioning	Media Partitioning	Media Partitioning
