Title : Replication Solutions for the
HP StorageWorks EVA

Version : DEMO

1.Which events can you see in the Replication Solutions Manager?

- A.only events that are related to DR groups
- B.only the Continuous Access specific events
- C.only events that are related to managed sets
- D.all EVA events for the subsystems that are part of the Continuous Access environment

Correct:D

2.Replication Solutions Manager receives Continuous Access event information directly from _____.

- A.HSV controllers
- B.Command View EVA
- C.Systems Insight Manager
- D.Storage Management Server Notification Utility

Correct:A

3.Which three would result in a Replication Solutions Manager event? (Choose three.)

- A.Vdisk failure
- B.job completion
- C.disk group created
- D.transitioned to logging state

Correct:A B D

4.Which two statements about Business Copy (BC) are true? (Choose two.)

- A.BC is limited to 16 EVA storage systems.
- B.BC supports an unlimited number of storage systems.
- C.BC supports up to 25 servers running the BC host agent.
- D.BC supports an unlimited number of servers running the BC host agent.

Correct:A D

5.To be a Business Copy (BC) server, the Storage Management Appliance MUST have which three installed? (Choose three.)

- A.BC server software
- B.Command View EVA
- C.SAN connection to a host
- D.SAN connection to a HSV storage subsystem

Correct:A B D

6.Where is the Business Copy (BC) server component installed in the diagram?

- A.storage array
- B.host (Node 2)
- C.desktop with web browser
- D.Storage Management Appliance (Node 1)

Correct:D

7.You are creating a DR group for a database. Which disk group is used for the write history log for the database DR group?

- A.an empty disk group with 2 TB of space
- B.a new disk group will get created for the log disk
- C.3 TB database disk group with 1 TB of free space
- D.5 TB windows disk group with 2 TB of occupied space

Correct:D

8.A site loses intersite links for an extended period of time. When the links come back, all DR groups are merging. This causes a significant host performance issue. What are two recommended procedures used to enhance host I/O performance? (Choose two.)

- A.detach some copy sets
- B.issue a suspend command against some of the less critical copy sets
- C.issue a suspend command against some of the less critical DR Groups
- D.issue a suspend command against some of the less critical managed sets

Correct:C D

9.Why does HP recommend synchronous replication mode over asynchronous replication mode?

- A.Synchronous replication mode saturates at a lower rate.
- B.Synchronous replication mode provides better data protection.
- C.Write order is not assured using asynchronous replication mode.
- D.Synchronous replication mode responds faster when the I/O rate is below saturation.

Correct:B

10.Which two are valid Continuous Access EVA commands? (Choose two.)

- A.failover
- B.failback
- C.failsafe mode enable
- D.failsafe-locked enable

Correct:A
