**Exam** : **000-176**

**Title** : IBM Worklight V5.0.0.3  
Mobile Application  
Development

**Version** : V8.02

1.A banking company has deployed the Application Center for internal use. Before users can see the mobile client application in the list of available applications, which property of the mobile client application must be set to true?

- A. Label
- B. Package
- C. Installer
- D. Recommended

**Answer: C**

2.A company discovers a bug in one of the HTML pages of a Worklight hybrid mobile application that it has recently published to the Android Google Play store. It has fixed the bug and redeployed the application to the production Worklight Server without changing its version number.

Which additional administrative step, if any, must be performed for the update to take effect the next time a user accesses the application on a device?

- A. No additional administrative steps are required.
- B. Re-publish the application to the Android Google Play store.
- C. Change the application status to Updated in the Worklight Console.
- D. Change the application status to Updated in the Worklight Console and re-publish the application to the Android Google Play store.

**Answer: A**

3.A developer has prepared a Worklight mobile application for deployment to a production Worklight Server environment and generated the .war, .wlapp and .adapter files for it.

How should the developer deploy the application files to the production Worklight Server environment?

- A. Use the Worklight console to deploy the .war, .wlapp and .adapter files.
- B. Use the production application server's deployment tools to deploy the .war, .wlapp and .adapter files.
- C. Use the production application server's deployment tools to deploy the .war file, and the Worklight console to deploy the .wlapp and .adapter files.
- D. Use the production application server's deployment tools to deploy the .war and .adapter files, and the Worklight console to deploy the .wlapp file.

**Answer: C**

4.The following changes are made to a Worklight mobile application: 1.Web resources of version 1 (v1) are updated and deployed to the Worklight Server. 2. A new version 2 (v2) is deployed with its updateSilently property set to true.

What will be the direct update user experience on a device running v1 of the application when the user chooses to receive update?

- A. v1 is uninstalled first followed by a silent installation of v2.
- B. v1 web resources are updated first followed by a silent installation of v2.
- C. v1 web resources are reloaded after the update and the application remains on v1.
- D. The user is prompted to choose between updating v1 or installing v2 in the background.

**Answer: C**

5.A developer has deployed a Worklight mobile application to a remote Worklight Server environment

using a context root of app1 and wants to update one of the application's server-side components.

Which Worklight console should the developer use to re-deploy the component?

A. The Worklight console on the remote server accessed through the URL:

`http://remoteServerHostName:portNumber/console`.

B. The Worklight console in the local development environment accessed through the URL:

`http://localhostName:portNumber/console`.

C. The application-specific Worklight console on the remote server accessed through the

URL:`http://remoteServerHostName:portNumber/app1/console`.

D. The application-specific Worklight console in the local development environment accessed through the

URL:`http://localhostName:portNumber/app1/console`.

**Answer: C**

6.What are the server-side configuration requirements to enable collection of analytics data for reporting?

A. Configuration of parameters in the `worklight.properties` file to enable raw data collection and database connectivity.

B. Configuration of parameters in the `worklight-server.xml` file to enable raw data collection and database connectivity.

C. Configuration of parameters in the `worklight-reports.properties` file to enable raw data collection and JNDI database connectivityparameters in the `resources.xml` file.

D. Configuration of parameters in the `worklight-server.properties` file to enable raw data collection and JDBC database connectivityparameters in the `resources.xml` file.

**Answer: A**

7.A developer is preparing a Worklight mobile application for deployment to a production environment based on the following deployment requirements:

1. The application's context root is `myApp`.

2. The production Worklight Server's host name and port number are `prodHost` and `9080`, respectively.

3. The production Worklight Server is accessed using the `http` protocol.

Which changes must the developer make to properly configure the application for deployment to the production environment?

- A. In `worklight.properties`, set:
- `publicWorkLightHostname` to `prodHost`
  - `publicWorkLightProtocol` to `http`
  - `publicWorkLightPort` to `9080`
  - `publicWorkLightContext` to `/myApp`
- B. In `worklight.properties`, set:
- `worklightServerRootURL` to `http://prodHost:9080/myApp`
  - `publicWorkLightHostname` to `prodHost`
  - `publicWorkLightProtocol` to `http`
  - `publicWorkLightPort` to `9080`
  - `publicWorkLightContext` to `/myApp`
- C. In `application-descriptor.xml`, set `<worklightServerRootURL>` to: `http://prodHost:9080/myApp`
- D. In `application-descriptor.xml`, set `<worklightServerRootURL>` to: `http://prodHost:9080/myApp`
- In `worklight.properties`, set:
- `publicWorkLightHostname` to `prodHost`
  - `publicWorkLightProtocol` to `http`
  - `publicWorkLightPort` to `9080`
  - `publicWorkLightContext` to `/myApp`

- A. Option A  
B. Option B  
C. Option C  
D. Option D

**Answer: D**

8.A developer is writing a Worklight mobile application to run on Android and iOS platforms. The developer is using the Apache Cordova `device.platform` API in the code to identify the device's platform type.

Which additional step, if any, should the developer perform before building and deploying the application to successfully use the Apache Cordova API?

- A. Set the `<use-cordova>` element to `true` in the application's descriptor file to indicate the use of Cordova.  
B. Copy the `cordova.jar` library file to the project's server folder to make it available to the application at run-time.  
C. No additional step is required since the Cordova framework is automatically added into Worklight iOS and Android projects.  
D. Add a `<script>` element to the application's main HTML file to include the `cordova.js` JavaScript file that defines the API functions.

**Answer: C**

9.Which three actions can be done in the Rich Page Editor? (Choose three.)

- A. Edit element properties.  
B. Compare different skins using the Split view.  
C. Drag from the Palette view to create dojo widgets.  
D. Drag from the Palette view to create HTML form tags.  
E. Preview the layout with all browsers installed in the local machine.

**Answer: A,C,D**

10.As a part of the application design, the developer needs to handle the scenario where the user sends the application to the background and then opens it again.

How should the developer do this?

- A. Add an event listener to the foreground event and handle the return to the foreground.
- B. Add an event listener to `WL.Events.WORKLIGHT_IS_CONNECTED` and handle the callback.
- C. Add an event listener to the background event and handle the return to the background, without forgetting to reconnect to the backend.
- D. Use `WL.Device.getNetworkInfo()` to check if the application is in the foreground or background and handle the return to the foreground.

**Answer:** A
