**Title : CIW Web Security
Associate**

Version : DEMO

1.Which of the following causes problems with firewalls

- A. Control FTP
- B. Data FTP
- C. Active FTP
- D. Passive FTP

Answer: C

2.In relation to security, which of the following is the primary benefit of classifying systems?

- A. Ability to identify common attacks
- B. Identification of highest-priority systems to protect
- C. Ability to recover quickly from a natural or man-made disaster
- D. Collection of information for properly configuring the firewall

Answer: B

3.Irina has contracted with a company to provide Web design consulting services. The company has asked her to use several large files available via an HTTP server.

The IT department has provided Irina with user name and password, as well as the DNS name of the HTTP server. She then used this information to obtain the files she needs to complete her task using Mozilla Firefox.

Which of the following is a primary risk factor when authenticating with a standard HTTP server?

- A. HTTP uses cleartext transmission during authentication, which can lead to a man-in-the- middle attack.
- B. Irina has used the wrong application for this protocol, thus increasing the likelihood of a man-in- the-middle attack.
- C. A standard HTTP connection uses public-key encryption that is not sufficiently strong, inviting the possibility of a man-in-the-middle attack.
- D. Irina has accessed the Web server using a non-standard Web browser.

Answer: A

4.You have been assigned to provide security measures for your office's reception area. Although the company needs to provide security measures, costs must be kept to a minimum.

Which of the following tools is the most appropriate choice?

- A. Firewall
- B. Intrusion-detection system
- C. Camera
- D. Security guard

Answer: C

5.Which symmetric algorithm created by the RSA Security Corporation is a stream cipher that encrypts messages as a whole, in real time?

- A. RC4
- B. RC6
- C. RC5
- D. RC2

Answer: A
