Exam : **AZ-101**

Title : Microsoft Azure Integration and Security

Version : DEMO

1.Note: This is part of a series of questions that present the same scenario. Each
in the series contains a unique solution that might meet the stated goals. Some
sets might have more than one correct solution, while others might not have a correct solution.
After you answer a
in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure web app named App1. App1 runs in an Azure App Service plan named Plan1. Plan1 is associated to the Free pricing tier.
You discover that App1 stops each day after running continuously for 60 minutes. You need to ensure that App1 can run continuously for the entire day.
Solution: You change the pricing tier of Plan1 to Basic.
Does this meet the goal?
A. Yes
B. No
Answer: A
Explanation:
The Free Tier provides 60 CPU minutes / day. This explains why App1 is stops. The Basic tier has no such cap.
Explanations:
https://azure.microsoft.com/en-us/pricing/details/app-service/windows/

2.Note: This is part of a series of questions that present the same scenario. Each

in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure web app named App1. App1 runs in an Azure App Service plan named Plan1. Plan1 is associated to the Free pricing tier.
You discover that App1 stops each day after running continuously for 60 minutes. You need to ensure that App1 can run continuously for the entire day.
Solution: You add a triggered WebJob to App1. Does this meet the goal?
A. Yes
B. No
Answer: B
Explanation:
You need to change to Basic pricing Tier.
Note: The Free Tier provides 60 CPU minutes / day. This explains why App1 is stops. The Basic tier has no such cap.
Explanations:
https://azure.microsoft.com/en-us/pricing/details/app-service/windows/

3.Note: This is part of a series of questions that present the same scenario. Each in the series contains a unique solution that might meet the stated goals. Some sets might have more than one correct solution,

while others might not have a correct solution.
After you answer a in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure web app named App1. App1 runs in an Azure App Service plan named Plan1. Plan1 is associated to the Free pricing tier.
You discover that App1 stops each day after running continuously for 60 minutes. You need to ensure that App1 can run continuously for the entire day.
Solution: You change the pricing tier of Plan1 to Shared. Does this meet the goal?
A. Yes
B. No
Answer: B
Explanation:
You should switch to the Basic Tier.
The Free Tier provides 60 CPU minutes / day. This explains why App1 is stops. The Shared Tier provides 240 CPU minutes / day. The Basic tier has no such cap.
Explanations:
https://azure.microsoft.com/en-us/pricing/details/app-service/windows/

4.Note: This is part of a series of questions that present the same scenario. Each in the series contains a unique solution that might meet the stated goals. Some sets might have more than one correct solution, while others might not have a correct solution.
After you answer a in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure Active Directory (Azure AD) tenant named Adatum and an Azure Subscription named Subscription1. Adatum contains a group named Developers. Subscription1 contains a resource group named Dev.
You need to provide the Developers group with the ability to create Azure logic apps in the Dev resource group.
Solution: On Dev, you assign the Logic App Contributor role to the Developers group. Does this meet the goal?
A. Yes
B. No
Answer: A
Explanation:
The Logic App Contributor role lets you manage logic app, but not access to them. It provides access to view, edit, and update a logic app.
Explanations:
https://docs.microsoft.com/en-us/azure/role-based-access-control/built-in-roles
https://docs.microsoft.com/en-us/azure/logic-apps/logic-apps-securing-a-logic-app

5.Note: This is part of a series of questions that present the same scenario. Each in the series contains a unique solution that might meet the stated goals. Some sets might have more than one correct solution, while others might not have a correct solution.
After you answer a in this section, you will NOT be able to return to it. As a result, these questions will not

appear in the review screen.
You have an Azure Active Directory (Azure AD) tenant named Adatum and an Azure Subscription named Subscription1. Adatum contains a group named Developers. Subscription1 contains a resource group named Dev.
You need to provide the Developers group with the ability to create Azure logic apps in the Dev resource group.
Solution: On Subscription1, you assign the Logic App Operator role to the Developers group. Does this meet the goal?
A. Yes
B. No
Answer: B
Explanation:
The Logic App Operator role only lets you read, enable and disable logic app. With it you can view the logic app and run history, and enable/disable. Cannot edit or update the definition.
You would need the Logic App Contributor role. Explanations:
https://docs.microsoft.com/en-us/azure/role-based-access-control/built-in-roles
https://docs.microsoft.com/en-us/azure/logic-apps/logic-apps-securing-a-logic-app
