Title : IBM WebSphere Enterprise Service Bus V7.0,Integration Development

Version : DEMO

1. An integration developer has been tasked to develop a mediation module that integrates a legacy J2EE application deployed on a remote server. The legacy application is exposed through an EJB facade and the integration developer decides to use an EJB import. What is the most suitable approach to configure it? The integration developer should:

A. add the corresponding EJB client project to the module dependencies and select the EJB local interface for the import.

B. import the corresponding EJB client project into the workspace and select the EJB remote interface for the import.

C.create a WSDL interface with the same operations as the EJB interface, select it as the import interface and add the EJB JNDI Name in the binding section.

D. use the external service wizard to point to the EJB through its IIOP URL and the wizard automatically creates the interface and the business objects for the import.

Answer: B

2. A mediation module must be designed to participate in a transaction initiated by a client component. Which of the following settings should be used by the integration developer to meet the transaction requirements for the mediation module?

A. Set the Transaction qualifier to False and the Join transaction qualifier to True.

B. Set the Transaction qualifier to Global and the Join transaction qualifier to True.

C. Set the Transaction qualifier to Local and the Join transaction qualifier to False.

D. Set the Transaction qualifier to True and the Join transaction qualifier to True.

Answer: B

3. An integration developer is developing a mediation flow component to integrate PeopleSoft Enterprise. The integration developer has identified WebSphere Adapter for PeopleSoft Enterprise for this integration. Which technology specification is implemented by this adapter?

A. Java EE Connector Architecture (JCA)

B. Java EE Component Architecture (JCA)

C. Java EE Connectivity Architecture (JCA)

D. Java EE Communication Architecture (JCA)

Answer: A

4. An integration developer wants to access a database table on a DB2 database installed on an AIX system using a JDBC Adapter. Using the configuration wizard of the JDBC Outbound Adapter import, the integration developer is prompted for JAR files. Which kind of JAR files are required?

A. AIX specific JAR files

B. JDBC standard JAR files

C. DB2 specific JAR files

D. DB2 and AIX specific JAR files

Answer: C

5. An integration developer is developing a mediation flow component using WebSphere Adapters. It is observed that the events are being delivered by multiple threads on several channels simultaneously. What type of event delivery mechanism is used?

A. Ordered
B. Unordered
C. Persistent
D. Non-persistent
Answer: B
