Exam : **HPE0-V29**

Title : HPE Virtualization and Cloud Fundamentals

Version : DEMO

1.A cloud platform assigns capacity from a shared pool to several departments. During a demand spike, a department receives more capacity and releases it when demand falls.
Which TWO cloud characteristics are demonstrated? (Choose two)
A. On-demand self-service
B. Broad network access
C. Measured service
D. Resource pooling
E. Rapid elasticity
Answer: D, E
Explanation:
Sharing dynamically assigned provider resources demonstrates resource pooling. Expanding and releasing capacity with demand demonstrates rapid elasticity.

2.A customer's staff will set service requirements, while HPE performs day-to-day infrastructure operations within an agreed scope.
Which HPE service category most directly matches this division of work?
A. Advisory and Professional Services
B. Managed Services
C. Education Services
D. Support Services
Answer: B
Explanation:
Managed Services matches the request for HPE to perform ongoing operations on the customer's behalf. Specific duties remain governed by the service contract.

3.An architect compares the dHCI and HPE SimpliVity deployment paths for HPE Private Cloud Business Edition.
Which statement correctly distinguishes their infrastructure models?
A. Both paths obtain their primary VM storage from an external storage array.
B. dHCI converges compute and storage in each host; SimpliVity requires a separate storage array.
C. Both paths require compute and storage capacity to scale together as a single building block.
D. dHCI separates compute and array storage; SimpliVity uses a hyperconverged infrastructure model.
Answer: D
Explanation:
dHCI combines separately provided compute, storage arrays and networking under integrated management. SimpliVity provides a hyperconverged building block.

4.In the HPE SimpliVity OmniStack deployment workflow described in the 5.1.0U1 guide, a host has been deployed successfully.
Which activity is listed among the post-deployment tasks?
A. Verify the network access needed for host deployment.
B. Create backup policies and assign them to the virtual machines.
C. Install Deployment Manager on the deployment workstation.
D. Gather account and network information for running Deployment Manager.

Answer: B
Explanation:
The guide lists creating backup policies and assigning them to VMs after host deployment.

5.In the logical-network address model documented by the HPE SimpliVity OmniStack 5.1.0U1 guide, which TWO objects require an IP address on the Storage network? (Choose two)
A. The OmniStack Virtual Controller
B. The host iLO controller
C. The vCenter Server
D. The Arbiter service
E. The VMkernel port
Answer: A, E
Explanation:
The documented Storage network includes an address for the Virtual Controller and an address for the VMkernel port.
